

Borwin VI – Siekmann awarded Valve Contract for the Borwin VI project

STORIES OF MISSION ZERO – Borwin VI

Borwin VI – Siekmann awarded Valve Contract for the Borwin VI project

Dortmund, 01.03.2024, News – Siekmann has received a

large valve order from a leading international plant manufacturer (EPC) for a converter platform in an offshore wind farm in the North Sea. The partnership helps to support the energy industry in the transition to sustainable, reliable and affordable energy.

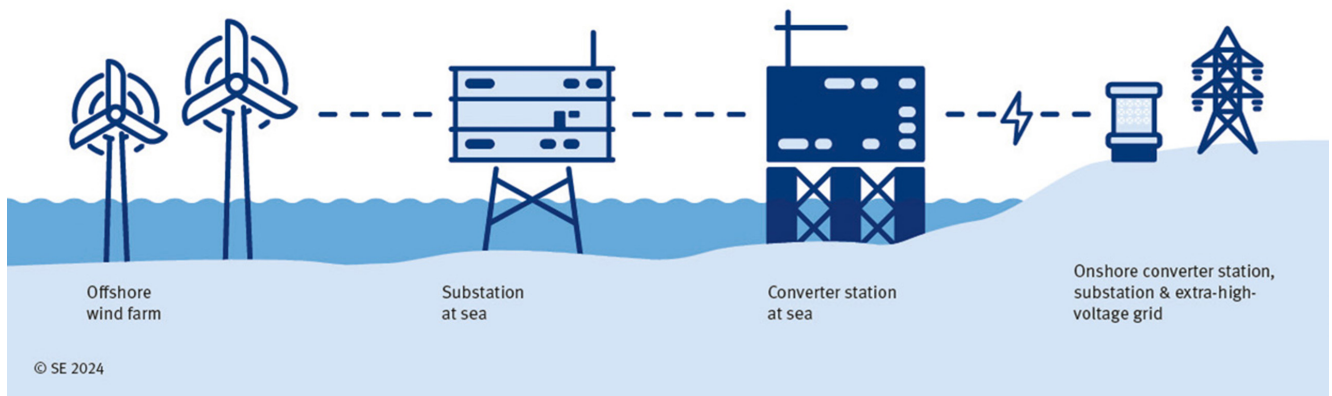

Siekmann's scope includes project management and consulting services for the supply of butterfly valves and gears, including production supervision, acceptance, performance guarantee and project completion. Delivery is scheduled for July 2024.

About the project

Borwin VI is an offshore grid connection system to be implemented by a leading European grid operator in the German North Sea. Electricity generated from offshore wind farms will be converted into direct current and transported to an onshore converter station near Büttel, Germany. Here, the electricity is converted back into three-phase current and fed into the extra-high voltage grid. The converter station (topside) is being built in a shipyard in Dubai in the United Arab Emirates. The facilities and the power grid are scheduled to go into operation in 2027. This project in the field of renewable energies will help shape a better tomorrow and leads to considerable cost savings through the use of new

technology.

“Siekmann is proud of the business relationship,” said Michael Tielking, Managing Director and CEO. “Our extensive product and technology expertise, combined with professional project management and execution capabilities and decades of experience, puts us in a unique position to make this large order a success.”

Project scope

Project scope

Valve type: Butterfly valves and gears for use in salt water

Material: Super duplex Stainless Steel

Nominal size: DN 80 - 350

Pressure class: PN 16

About Siekmann Econosto

Siekmann Econosto is an internationally renowned supplier of high-quality industrial valves that has stood for outstanding technical performance, safety, quality, reliability and

internationality for more than 65 years now. The company provides valves for international plant manufacturers and operators of industrial installations throughout the world and pursues a clear goal: we want to improve our customers' processes and make them more efficient and more sustainable. Our mission: Let's make industry work better.

We are perfectly positioned to support our customers with technological expertise, a comprehensive portfolio and many years of experience, and to benefit from the major growth drivers such as the increasing demand for energy and sustainability. The company is part of the Dutch ERIKS Group, a specialised industrial services provider with a revenue in the single-digit billion range and 5,000 employees in 15 countries.
